# Choose Your Insulation

## Good

### 06 Model

#### NON-INSULATED

24 GA. • PAN STYLE • SINGLE-SIDED STEEL

A pan-style garage door constructed with a layer of 24-gauge sheet metal. Long-lasting and relatively maintenance-free.

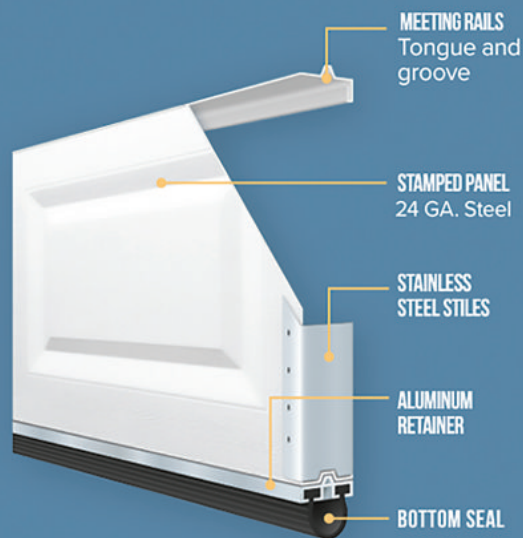

#### CONSTRUCTION:

2" thick, one-sided

Width range: 6'6" - 20'2"

Height range: 7'0" - 14'0"

## Better

R Value 7.7

### 14 Model

#### INSULATED

24 GA. • VINYL BACK • POLYSTYRENE INSULATION

With an added layer of polystyrene insulation and an interior vinyl backer.

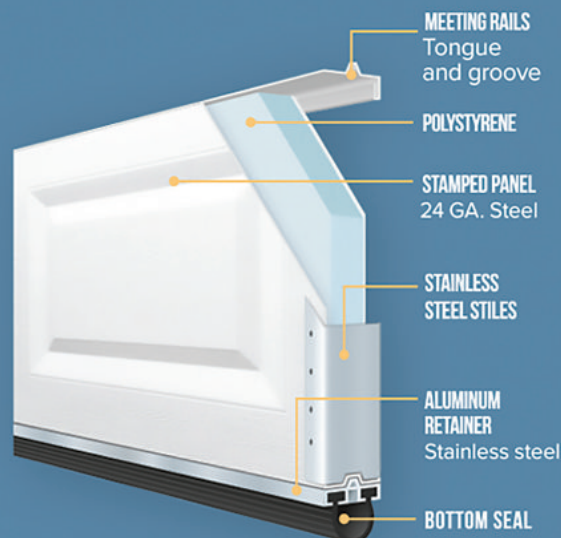

#### CONSTRUCTION:

2" thick, polystyrene vinyl back

Tog-L-Loc fastening system

Width range: 6'6" - 20'2"

Height range: 7'0" - 14'0"

## Best

R Value 9.7

### 18 Model

#### INSULATED

27 GA. • SANDWICH STYLE • POLYSTYRENE INSULATION

Highest level of R-values and insulation with unequaled climate control and sound barriers.

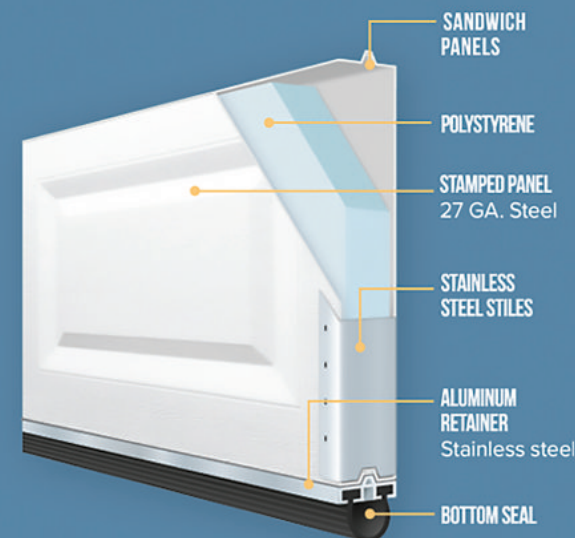

#### CONSTRUCTION:

2" thick, polystyrene vinyl back

Tog-L-Loc fastening system

Width range: 6'6" - 20'2"

Height range: 7'0" - 14'0"

# Elite/Premium Insulation

## R-Value 18.4

For This Option: Please Reference the Safeway Ambient Series  
**Same construction as the BEST option BUT  
with Spray in Polyurethane Foam**

	<b>VS</b>	
<b>POLYSTYRENE</b>		<b>POLYURETHANE</b>
1 R-values range from 6.3 to 12.9		1 R-values range from 18.4 to 20.4
2 Polystyrene sheets bonded to steel		2 Liquid foam expands to fill the entire steel cavity
3 More economical		3 More expensive
4 Increases comfort of the garage		4 Keeps garage 10 – 20 degrees warmer in the winter and cooler in the summer
5 Two or three-layer construction		5 Three-layer construction
6 Reinforces steel to help resist dents and vibration when opening or closing		6 Adds strength and rigidity to steel to better resist dents; the door is quieter

### Benefits:

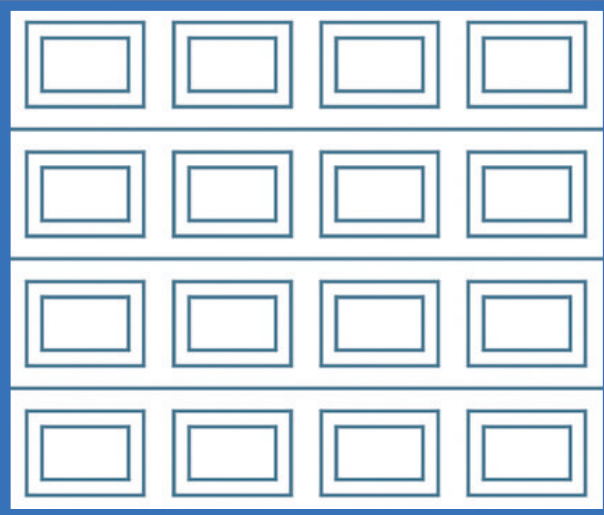

- Double the R Value
- MORE Temperature Control
- Quieter Operation
- Longer Life

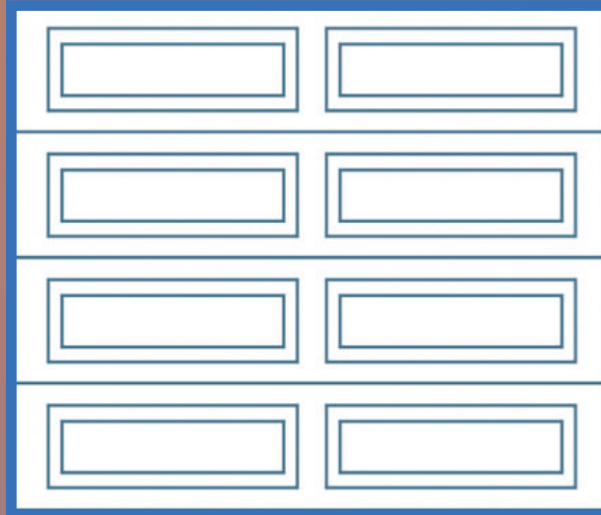

Expanding Rigid Foam

# Common Door Repairs

## Bundle and Save \$

We love our customers but we don't want to see you often for a different repair. Often when we replace one part, the new part will outlast the other remaining moving components. Bundling together these repairs costs more upfront but will **SAVE \$ over time** for other upcoming repairs. While we have the system apart it is much cheaper to replace parts at the same time.

**Average Cost of Each Repair: \$200-\$500**

**Average Cost for As Needed: \$1,200-\$1,800**

	Springs	Cables	Parts	Rollers
				
<b>Function</b>	Does the heavy lifting, makes any door feel lighter	Connects the springs to the door, so they can help lift the door	Reduce friction in the system, allows the assembly to rotate	Helps the door move smoothly in both directions
<b>Standard</b>	10,000 cycles	Standard braided wire	Plastic center bearing	Basic nylon roller
<b>Ours</b>	50,000 - 75,000 high cycle	Heavy duty braided wire	Steel center bearing	13 ball bearing with dust cap
<b>Warranty</b>	10 Years Parts 1 Year Labor	10 Years Parts 1 Year Labor	10 Years Parts 1 Year Labor	10 Years Parts 1 Year Labor

# Common Motor Repairs

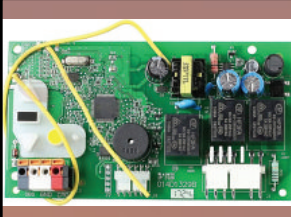

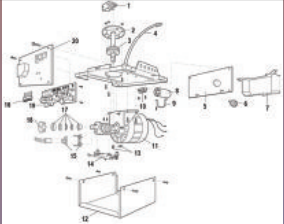

## Replace vs Repair

The average life expectancy of a frequent use motor can be anywhere between 10-20 years. Electronics are usually the 1st to fail.

We love our customers but we don't want to see you often for a different repair. When we replace one part, the new part will outlast the other remaining components. Opting for a replacement costs more upfront but will **SAVE \$ over time** for other upcoming repairs. If you have us repair each part as the motor ages it would end up costing more than a replacement.

Average Cost of Each Repair: \$200-\$400

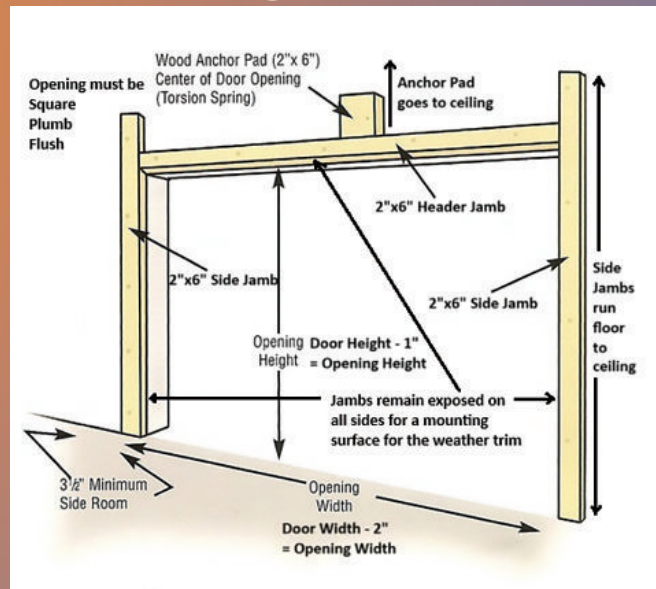

Average Cost for As Needed: \$1,200-\$1,500

	Logic Board	Sensors	Gear & Sprockets	Parts
				
Function	Serves as the brain of the unit. Circuit board controls operation	Safety feature that prevents the door from closing on objects	Turns gears to allow the door to open or close	Belt/chain, trolley, capacitor, travel module, etc
Warranty	1 Year Parts & Labor	1 Year Parts & Labor	1 Year Parts & Labor	1 Year Parts & Labor

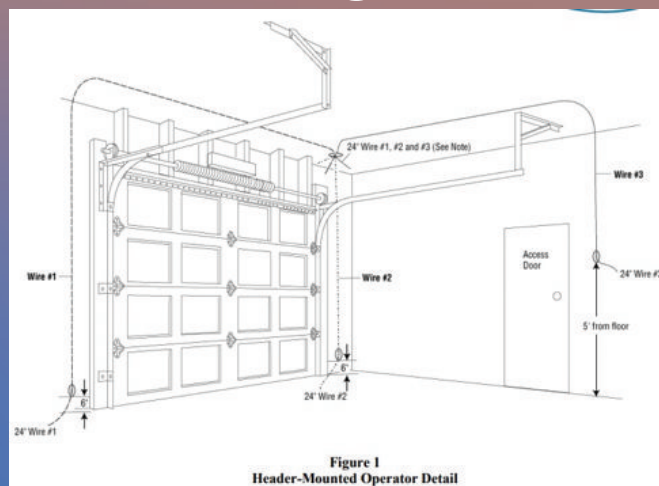

*Reference motor page for options and benefits of replacing.*
